Future Work

Overview and Objectives

- 01 **The Goal:** Building a fully functional, peer-to-peer auction platform within a local development environment.
- 02 **The Unconventional Twist:** Moving beyond basic WordPress blogging/e-commerce use cases to build a dynamic application handling real-time data states.
- 03 **The Simple Stack:** Standardized on WordPress backed by a MySQL relational database, running locally via XAMPP, and tracked using Git/GitHub.

Platform Architecture

- 01 **The E-Commerce Base:** The WooCommerce plugin handles product tables, transactional logic, and checkout pipelines.
- 02 **Auction Integration:** An auction plugin works together with WooCommerce to convert standard fixed-price products into dynamic auction items.
- 03 **User Auth and Access Control:** Another plugin was used for user registration and login. Only the admin account is allowed to add new products, but the rest can bid and purchase.

The auction winner may fill out the relevant information to finalize the order of the auction item.

They can choose one of the available payment options. It is also possible to apply a couple for discount or similar benefits, if available.

Once the order is placed, it will appear under the “Orders” section on the user’s account for future viewing.

Future Work

Automated Bidding Engine

Bids will be incremented automatically on behalf of a user whenever they are outbid, stopping only when their maximum limit is reached.

Anti-Sniping Safeguard

If a bid is received within the final two minutes of an auction, the expiration time will automatically be extended by an extra 60 seconds to allow other buyers a fair chance to respond.

Outbid Alerts

A notification system can be implemented for outbid alerts.

Automated Shipping Label Generation

Shipping API integrations can be added to the seller dashboard to allow weight and package dimensions to be calculated automatically at checkout, generating printable shipping labels directly for the seller.

Direct Messaging System between Buyers and Sellers

This will allow potential buyers to ask sellers questions about item condition or shipping options directly on the listing page without exposing personal contact information.

Move Away from WordPress Development

Developing with WordPress is very limiting due to excessive dependency on plugins. A developer who knows programming has no reason to use WordPress.

Thank you!

Thank you for your time and attention.
